3.2 Participatory Catchment Conservation

i. Establishment of Fuel Wood Plantation

The Authority has also implemented participatory catchment conservation in order to protect the catchment of the Ewaso Ng'iro North River Basin by reducing pressure on the forest for fuel wood and poles through establishment of community woodlots and rehabilitation of degraded forest areas. This entailed distribution of 100,000 exotic and 20,000 tree seedlings to groups and institutions in Marsabit and Moyale Districts.

ii. Promotion of Non Wood Extractive Activities

In order to promote income generation for the local communities without destruction of forests the Authority undertook to promote beekeeping in the entire basin. This entailed training and supply of beehives to several identified groups. In Marsabit the Authority distributed a total of 284 beehives in the County whereby Marsabit, Laisamis and Moyale districts got 100, 30 and 154 respectively.

The Authority has set up a gums and resins processing plant in Wajir to add value to these abundant resources.

3.3 Capacity Building

The Authority has also undertaken several for Water Resources Users Associations, trainings on water management, beekeeping, Gums and Resins, Agro forestry and participatory forest management among others.
